

MetroZone Pilot Pack

A Turnkey Solution for deploying Hotzones

As the leader in MetroZone deployments, Pronto Networks is offering a turnkey package to rapidly and easily deploy a hotzone network.

Key advantages of a MetroZone Pilot Pack Deployment

Deploying the MetroZone Pilot Pack can have positive impacts in a variety of ways:

- Accelerated Wi-Fi deployment, operations learning curve
- Crash course on minimum requirements and operations modeling
- Test cutting-edge IP applications and services
- Work with a turnkey vendor

Recipe for successful Wireless Infrastructure Deployment

Though the potential benefits are simply too great to ignore, building a successful wireless city is a major undertaking. Careful pre-planning before deployment, which yields short term gains and long term growth is the recommended path for cities.

- Implement a focused pilot program
- Plan a phased implementation that delivers value at each step
- A scalable infrastructure that supports seamless roaming
- A standards-based wireless technology roadmap

Cities and Operators could try out the MetroZone Pilot Pack for new marketing campaigns and wireless applications. They could also leverage the experience gained by reference models for Muni WiFi market such as Corpus Christi, TX and Chaska, MN that have successfully deployed the Pronto OSS solution. This would help them evolve their network deployment and business model to suit the needs of their constituents.

MetroZone Pilot Pack - \$25,000*

- 100 User license for Pronto Managed Services for 1 Year
 - Software license
- 1 Pronto UniFi Service Controller
 - Location gateway
- Choice of Network Radio
 - Outdoor coverage upto 1/3 sq. mile
- Site Survey Services
 - Network design, RF engineering
- Network Installation and Project Management Services**
 - Deployment by certified technicians
- End-user Call Center Support
 - Branded Help Desk

* add-on options available

** travel expenses deployment location-dependent

Pronto Networks' MetroZone Pilot Pack

To meet this immediate need, Pronto Networks steps in with a turnkey solution that brings a carrier-class metro-scale radio network technology and Operations Support System (OSS) software together. With this joint solution, cities and operators interested in deploying a metro-scale Wi-Fi network in a localized area of 1/4 to 1/3 square mile, can now do so within a short period and at a very low cost.

It provides municipalities and Wireless Internet Service Providers (WISPs) the ability to leverage Pronto's network infrastructure and focus on expanding their network and acquiring new customers. All Pronto products are based on industry standards, which facilitate easy migration to emerging technologies.

A major characteristic of the UniFi OSS is that it is hardware agnostic and allows customers to integrate with any brand of network radios and IP based equipment or applications.

Best of all, customers deal with a single vendor to deploy an end-to-end scalable solution!
